

Extreme Garden Makeover!

Introduction

Urban farming consultant Jon Walsh shows how easy it is to convert a weed-covered garden bed into an attractive, multifunctional garden plot. Jon recycled paving stones to make a path and sea shells to create borders around three garden beds containing both flowers and vegetables.

The bare garden patch before work began

Gardening gear: compost, seedlings, lime.

Flowers were planted at the front (left) of each bed, and vegetables behind.

The end result – an edible garden with space to relax and smell the roses!
